**J B Assets Ltd – SCANZONE product**

Dear Sir,

Bosch Security is engaged in security related projects around the world, which involves the deployment of surveillance systems utilising the latest IP networking cameras in all kinds of environments.

The new generation of IP Networking Surveillance Cameras, offer many advantages over the previous versions of analogue cameras including Intelligent Video Analytics and higher definition models. In our experience, if a full system design including network parameters and climatic conditions are not fully taken into account, you can experience issues with IP Cameras functioning in harsh, and extreme climatic conditions. It is not uncommon for an IP Networking Camera to overheat and shut down in extreme temperatures.

We have worked closely with J B Assets Ltd and the Scanzone product from early conception, through the design phase, along various iterations and testing including an 18 month full exposure test in the Middle East. We are confident that when populated with Bosch IP cameras (fixed and PTZ) the Scanzone unit is the ideal product to deliver a reliable, robust, low maintenance solution for extreme climatic deployment.

Yours sincerely

  
Bosch Security Systems Ltd
